

THIOSPOT

A Scientifically Proven, Synchronized Approach

- ✓ Decreases melanin production by up to 60%
- ✓ Reduces tyrosinase activity by up to 70%
- ✓ Visible results from two months of use
- ✓ Non-cytotoxic
- ✓ Synchronized 3-ingredient formula:
Acetylglucosamine, Ethyl Linoleate,
Phenyl Ethyl Resorcinol

Scientifically proven for melasma,
solar lentigines and post-inflammatory
hyperpigmentation

Clinically Studied Treatment for Pigmentation

Melasma, solar lentigenes, and post-inflammatory hyperpigmentation all share the same root cause: an accumulation of melanin. Thiospot targets tyrosinase, the enzyme that drives melanin production, at three points in its cycle - disrupting synthesis to clear existing deposits.

Thiospot Intensive is a non-cytotoxic, clinically studied cream for face and décolletage. Used daily, it delivers a progressive, visible brightening effect without the harshness of traditional depigmenting agents.
